Weekly Progress Report-1

Project Name: Student Aid

Team Members: Harshitha Dodda, Jash Gandhi

Technologies Used:

- HTML
- CSS
- Java Script (to make user friendly interface)

Work implementation (this week):

We created an interface with options such as calendar, student deals and expense management. We also added details such as upcoming deadlines for students to know their date of submission (Homework), New student deals which include offers for the students and validity date of the offer as well. We also included an option that shows last/previous month expenses of the students, with this option they can plan their next month accordingly.

Future Implementation:

For next week, we will try to make the calendar, student deals and expense management buttons work. If the user taps on the button, it will navigate them to the page with all the required information. We are also planning to add contact information such as Instagram id, LinkedIn profile of the users.
